

Kelly-Creswell Truck Refurbish

Conversion To Airless Spray System For Latex Paints

- Removed air spray components including tanks, spray guns.
- Installed air powered high pressure airless paint pumps utilizing existing compressor as power for the pumps.
- Installed a three compartment zero pressure stainless steel paint vat, 60 gallons yellow, 60 gallons white and 15 gallons cleaner.
- Installed new stainless steel plumbing, stainless steel paint filters and KC-700 high pressure airless paint guns on each carriage.
- Installed KC Mark 40D skipline control system and directional arrow board.
- Gun carriages and pointer rebuilt with new wheels & mechanical parts.
- Paint loading pump and vacuum bead loading system installed to transfer paint and bead from bulk containers to the unit.
- The unit is 100% waterborne compatible with latest high pressure airless paint system offering sharp edge lines with minimal overspray.

- Contact us with basic information on your striper including digital photos and we can then recommend a refurbish program that best suits your equipment and striping needs.
